

Proper use of your GateKeeper USB Extension Kit

WHY IS THIS IMPORTANT?

To ensure GateKeeper makes accurate decisions for locking and unlocking the computer, we strongly recommend placing the USB dongles in **direct line-of-sight** of the GateKeeper token – facing the user while they are using the workstation.

Please refer to the image below to help determine the optimal location for the USB dongle. Placement should reflect how users are wearing the Bluetooth-enabled key – either A) on lanyard around their neck or B) a retractable badge holder on the waist area.

USB EXTENSION KIT CONTENTS

- USB 3 or 6 ft. extension cable (x1)
- GateKeeper retractable steel cable badge holder (x1)
- Wire management clips (x2)

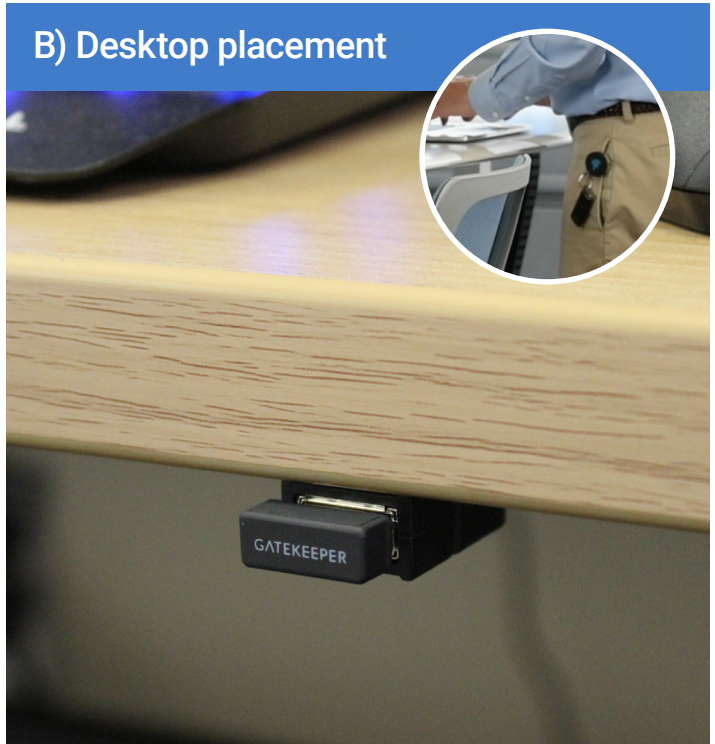

If you need assistance, please contact your GateKeeper account manager or email us at support@gkaccess.com.

A) Monitor placement

If wearing the GateKeeper key around your neck or chest area (using lanyard or retractable badge holder), mount your USB dongle extension on the monitor to maintain direct line-of-sight.

B) Desktop placement

If wearing the GateKeeper key at waist height on a retractable badge holder, mount your USB dongle extension below the desk to maintain direct line-of-sight.
