

# GATEKEEPER for HEALTHCARE

## Patients over paperwork with touchless authentication

The most ergonomic, multi-user access method across your infrastructure.

Health professionals use computers for short intervals, moving frequently, and using multiple workstations. GateKeeper maximizes the safety and efficiency of the working environment by giving caregivers more secure and faster access to workstations and websites.

By providing a wireless access key to each user, GateKeeper simplifies the login processes, eliminating complex passwords, saving time, and maintaining strict HIPAA compliance.

- ✓ Hands-free 2-factor authentication for every user.
- ✓ Exceed HIPAA compliance standards.
- ✓ Real-time user location and login activity monitoring.
- ✓ Faster access means faster time to service.

## Provide every user hands-free access for one or multiple computers on your healthcare IT network.

No need to remove your gloves for a fingerprint scan, or glasses for an iris scan. GateKeeper logs you in instantly and automatically.

- ✓ Enterprise-grade security with user-focused design.
- ✓ Unwitting insiders are the leading cause of data exposure.
- ✓ Infection control audit in sensitive departments (e.g. surgery).
- ✓ Leverage every minute of your providers' time while GateKeeper handles security.

### MORE TIME WITH PATIENTS

Minimize time logging in and out of workstations, increasing time with patients for better healthcare outcomes and improving productivity.

### PROACTIVE HIPAA COMPLIANCE

Enforce auto-lock as a policy for unattended computers, mitigating some of the most common security risks, and ensuring compliance.

### SIMPLIFY SHARED CREDENTIALS

Easily set user access to multiple computers from the Enterprise Hub, simplifying the complex tasks of managing multiple credentials.

### REAL-TIME LOCATION & REPORTING

Know exactly who accessed each computer in real time. Audit records of computer access is automated by GateKeeper.

*Enterprise Hub provides an easy way to administer security policies for all computers and users on the network, while detailed access logs verify authenticity of users logging onto your healthcare organization's network locally or remotely.*

# GateKeeper Enterprise: The key to secure access in healthcare.

No other access management solution addresses the unique needs of healthcare IT security like GateKeeper Enterprise.

Problem	Feature	Solution	Benefit	Stakeholders
<b>Unlocked computers in the practice</b>	Enhanced, security on auto-pilot	Prevents users from leaving sensitive data open when they leave the workstation	Helps protect the practice from breaches and PHI exposure that could result in fines or loss of reputation	IT administrator, Owner, Security Officer
<b>Must meet HIPAA/HITECH compliance standards</b>	Eliminates manual locking and unlocking	The practice eradicates non-compliant/shared passwords	Huge risk reduction in HIPAA audits for using shared passwords	Compliance Officer, Owner
<b>The practice needs to see more patients every day</b>	Touchless and automated access	GateKeeper unlocks machines when a user approaches, saving time with: <ul style="list-style-type: none"> <li>• overall authentication process</li> <li>• forgotten passwords</li> <li>• mistyped credentials</li> </ul>	The practice has more time to devote to seeing patients, which increases revenue	CFO, Owner, Professionals
<b>The practice wants information on employee and computer productivity</b>	Business intelligence reporting and audit logs	GateKeeper tracks the motion behavior of users during the workday, the amount of time spent seeing patients and their pattern of movement	The practice can make better decisions and combat HAIs using GateKeeper time and motion data	Owner, COO, Risk Officer, Network Administrator

## FEATURES & BENEFITS

- Automatic lock (100% security).
- Fast login with optional 2-factor authentication.
- Regulatory compliance (e.g. HIPAA, HITECH, CJIS).
- Centralized credentials management for easy provisioning.
- Richly detailed audit logs for workplace optimization and security audits.
- Web-browser based user interface.

## CENTRALIZED MANAGEMENT

- Many-to-many matching of GateKeepers to computers.
- Group computers/users according to access control needs.
- Revoke/delete GateKeeper credentials from the server admin console.

## AUDIT LOGS FULL OF RICH DATA

- Powerful analytics to measure efficiency and time secured.
- Detailed access logs from each GateKeeper-enabled computer.
- Identify users even on shared computers.
- Filter data based on GateKeeper credentials, computers, and activity.

## SPECIFICATIONS

- Client software supports Windows devices with Win 7, 8, 8.1, 10, and Mac OSX version 10.13 or above.
- Enterprise Hub requirements: Windows Server 2012 & SQL Database.
- Adjustable range from inches to 30 feet.
- State-of-the-art AES256 encryption to secure credentials.
- Secure password manager and faster SSO.
