

## Approach your patient's computer with your new password caddie.

### PROXIMITY LOCK AND UNLOCK

Login and out seamlessly with your presence.

#### WITH GATEKEEPER

**Computer automatically authenticates you.**  
No more typing long, mandated passwords.  
Typing credentials is eliminated.

**All work reopens on any PC you move to.**  
When you leave one PC and move to another, your saved session opens back up — saving maximum time.

**All passwords auto-fill on websites.**  
No more typing usernames and passwords on any website. Your passwords will be available on any computer you use.

**100% rate of correct passwords.**  
Automated passwords never fail and are never incorrect. Save lots of time.

**Auto-locks computer when leaving.**  
Automatic lock when the user leaves — minimizing the threat window drastically.

#### BEFORE GATEKEEPER

**Type a long, mandated password.**  
Sometimes you forget your password, sometimes you mistype.

**Reopen everything that you need to access to do your job.**  
Every time you go to a different computer, you have to repeatedly reopen your work — wasting time.

**Log in again, every time you move computers.**  
Remember credentials, type username and password dozens of times a day.

**Log in again, every time you move PCs.**  
Remember credentials, type username and password dozens of times a day.

**Must remember to manually lock computer to meet compliance.**  
Everyone forgets to lock their computer. Especially in hospitals, this leaves PHI vulnerable to exposure.
