

5 AUTOMATED STEPS IN CLINICS

Automated Clinician Workflow for Logins

AUTO-LAUNCH WEBSITES

Have your websites ready to go when you login. Don't waste time bringing up websites you need every time you login. Have all required websites launch after your login to save you maximum time.

CLICK TO FILL IN PASSWORDS

Passwordless login to all your accounts. Click your password to fill in websites or click CTRL+SHIFT+G to fill your EHR password.

INSTANT PC LOGIN

Just type your PIN or tap your key to your sensor. Whether using a shared login, local account, or AD account, GateKeeper allows users to login to whichever account they need with a simple tap or PIN (2FA).

AUTO-LAUNCH EHR APPS

Have your EHR ready to login. Save urgently needed time in your clinic by having your EHR application instantly popup at login, ready for you to get to work.

WALK AWAY TO AUTO-LOCK

Ready for the next clinician to login. No more annoying timeouts and remembering to lock PCs. Just walk away and the next clinician can quickly login.
